DETAILED ACTION

1. The amendment filed January 26, 2004 has been received and entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 1. Claims 1-3, 5-6, 13, 16-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Doyle (U.S. Patent 5,961,042).

Doyle teaches an apparatus for generating a combustible gas flame above a surface of a liquid comprising a manifold (64) (see Fig. 3) completely disposed within the liquid (see Fig. 1 and 2) (col. 1, lines 57-61) and defining a manifold space at least one aperture (see Fig. 3). The apparatus includes a combustible gas source i.e. a gas tube connected to a combustible gas source (48, 50) configured to deliver combustible gas to the manifold space, wherein the manifold delivers the combustible gas into the liquid through at least one aperture and wherein the combustible gas evolves from the liquid for ignition into the combustible gas flame (see Fig. 2). The apparatus comprises an air source, wherein the air source is configured to deliver air to the manifold space (col. 2, lines 21-28). Doyle teaches a liquid outlet (60) positioned adjacent to the manifold, wherein the liquid outlet is defined by an outer surface of the apparatus, and a pump (44, 46) configured to deliver a supply of liquid to the liquid outlet, wherein the liquid outlet delivers the supply of liquid into the liquid i.e. a pool of water (22). The

Art Unit: 3752

apparatus includes an isolation assembly (see Fig. 2) disposed in the liquid i.e. a pool of water, to surround the manifold and isolate the supply of liquid from liquid. The electronic and flame-sensing assembly ignites the combustible gas as it evolves from the liquid and wherein the electronic ignition and flame-sensing assembly senses when the combustible gas flame has extinguished (66, 68, 70 and 74).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lin (U.S. Patent No. 6,565,940) in view of Doyle.

Lin teaches an apparatus having a float (104) configured to float on the surface of the liquid, and a manifold disposed on the float and defining a manifold space (20) and at least one aperture (204). The apparatus teaches a liquid source disposed on the float and coupled to the manifold to deliver liquid to the manifold. Lin does not teach a combustible gas source disposed on the float and coupled to the manifold. Doyle teaches a combustible gas source disposed on the float and coupled to the manifold (48), wherein the combustible gas source delivers combustible gas to the manifold space and wherein the combustible gas is delivered from the manifold for ignition into the combustible gas flame. It would have been obvious to one skilled artisan in the art

Art Unit: 3752

at the time the invention was made to modify the teachings of Lin and combine with Doyle to have a combustible gas source disposed on the float and coupled to the manifold, wherein the combustible gas source delivers combustible gas to the manifold space and wherein the combustible gas is delivered from the manifold for ignition into the combustible gas flame.

Allowable Subject Matter

- 3. Claims 4, 14-15, 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 4. Claims 7-12, 22-24, 28-32 and 38-42 are allowed.

Response to Arguments

5. In view of the Amendment filed on January 26, 2004, PROSECUTION IS HEREBY REOPENED.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thach H Bui whose telephone number is 703-305-0063. The examiner can normally be reached on Monday-Friday, 7:30-4 p.m.
